The Art of The Writer On Wednesday, I had the honor of moderating a panel of cartoonists at Otakuthon, a comic convention. If you follow me on Twitter, you probably saw me asking the artist Tom Hart about his life as a professional cartoonist. Here's an excerpt: The other day, I came across an interview with Tom Hart. The interviewer was so kind as to

ask a number of questions I had about Hart's process. I thought I'd share the answers with you here, and maybe you can glean some insight into the creative process of cartooning.

1. Do you use a sketchbook to record thoughts and ideas for your comic strip? I do. I have three of them, and I use one of them to write, one to draw, and one to draw ideas for the script. This is particularly helpful for me because the script is usually the last part of the story, and I try to have it as tight and as accurate as possible.
2. How long does it take you to create a page of comics? I work seven days a week, so it can be anywhere from a few minutes to a couple of hours, depending on how much I'm focusing on the story and the dialogue. A story I work on for a few days might end up being a few pages.
3. How do you choose the dialogue that goes into your panels? I choose the dialogue from my daily conversations. There are so many new words and idioms that I just have to be sure to incorporate them. My dialogue is the most important part of the strip. I try to write the best dialog I can think of.
4. How do you decide the final look and feel of your comic strip? I a1d647c40b

Add constraints: Attach a constraint in your drawing. (video: 1:50 min.) When the user clicks a second time on a reference point, that new point becomes the new constraint anchor. (video: 1:50 min.) Constraints can be organized in groups. The constraint anchor can also be displayed or hidden. (video: 1:50 min.) Stick and slide: Arrange drawing elements on a drawing surface with the Stick tool. (video: 3:21 min.) The user can adjust the point's horizontal and vertical position by dragging. (video: 1:35 min.) Append object to another drawing: New, versioned symbols, text and text styles can be created from templates. (video: 1:32 min.) All parameters in a template can be edited directly on a symbol or text style. (video: 2:36 min.) Before symbols, text or text styles can be created from a template, the user must choose the object from a library. (video: 2:34 min.)
