Editor's Note: This post was originally published on December 15, 2012. Many time-starved architects and designers are turning to the cloud in their quest to find better ways to get the work done. I've seen it myself in my work as a freelance designer: co-workers send me links to great tutorials that can help them get better done faster. Now, thanks to Anoushka Bello's excellent How-To Geek article, we can share all of those great cloud-based resources with you.

1. Trimble SketchUp—\$45/year If you've ever tried to share and edit SketchUp designs online, you'll know that the community is quite small and the way people use SketchUp really depends on the capabilities of each person. Trimble SketchUp offers a good cloud-based solution for sharing designs and making edits that anyone can use, from Microsoft's new Windows 8 operating system. SketchUp includes a one-stop place for all of your files, so you don't have to worry about backing them up—your designs are automatically saved and online. That's just the beginning. SketchUp also includes a fully customizable 2D toolbar for accurate sizing and placement of 3D objects—with a few clicks you can turn virtually anything into a 3D scene. SketchUp is a powerful and intuitive tool for creating 3D models and publishing them online. You can easily share your projects with colleagues, friends, or the SketchUp community at the Trimble SketchUp website.
2. Google SketchUp Pro—\$30/year If you don't already have a SketchUp license, the "pro" edition is a great way to learn the tool. (Or if you already have a SketchUp license, you can use SketchUp Pro to export, save, and share projects.) SketchUp Pro includes 2D and 3D templates and is fully compatible with SketchUp. It's easy to navigate and customize, with tools to cut, copy, move, and rotate any object in your model. The third edition includes the key features of the pro edition plus an improved 3D modeling tool. SketchUp Pro is a good way to start using the SketchUp interface before buying the full version.
3. Mozilla Firefox—free Mozilla Firefox is a web browser that's fast, customizable, and powerful. A huge amount of design and development talent has been focused on making Firefox work well with
