With Raw Image Analyzer you'll be able to do all this and more! Raw Image Analyzer is the result of our many years of experience in photo analysis, and it's unique at the same time - the other tools we have produced are designed mainly for professionals and are therefore only available to a selected number of our clients. But Raw Image Analyzer is easy and very useable for everyone. It also has a minimal interface that will make you feel at home immediately. Where to start? With Raw Image Analyzer you start by simply dragging and dropping two or more files, of any type, into the program. And that's not all. You can even use command line and load them with the 'old-fashioned way' - you just drag and drop one file into another, and the program will automatically do the rest. As a result, you can save time and do different things. Raw Image Analyzer can instantly calculate the total area, mean brightness, standard deviation and any other color characteristic of the pictures in a window. The program can analyze images in multiple ways. For example, you can opt to analyze by color area; compare the raw total area of pictures, compare the total area of pictures with the analysis of selected/roi for each color; analyze the colors, the contrast and the tones in a window or a file, etc. And the choice is yours. The program will work just fine if the photos are not very large (all the files in the same folder) or big (all the files on two or more separate folders), but if you need to see the results of the comparison, like the histogram of the images to see how pictures look, then it will be best to separate them. Why? Because, by using two (or more) relatively large photos, your screen will only be
