In contrast, rival commercial CAD software such as Onshape and SketchUp are Web-based collaborative design tools. Autodesk started to develop AutoCAD in the late 1970s at the request of a client who requested a custom AutoCAD-based design system for use on an Apple II, the first widely available microcomputer with internal graphics capability. The Apple II was popularized in the early 1980s, in part by the 1982 release of its popular Apple II Programmer's Reference Guide. It was not until late 1982, however, that the Apple II became a popular option for CAD operations, as Apple II computers (even the most basic models) were much more powerful than early desktop minicomputers. AutoCAD was first released in December 1982, and the first AutoCAD print advertisement was published in the January 1983 issue of the trade magazine Computer Dealer News. AutoCAD users, initially small in number, grew rapidly, and the number of users in the early years almost doubled every year. In 1985, CAD surpassed word processing in terms of installed base in the U.S., according to the U.S. Census Bureau. In 1987, the installed base of CAD was 10 times greater than the installed base of word processing. Despite the growth of AutoCAD's installed base, an important development in the late 1980s was the release of higher-resolution graphics cards, such as the VGA and SVGA, which allowed for higher-resolution graphics on desktop computers. By 1989, AutoCAD was being sold in almost every market segment. The release of the Amiga in the late 1980s was a major factor in AutoCAD's adoption as a popular desktop software package. With high-resolution graphics, AutoCAD and similar programs became useful for graphic design, engineering, and architectural drafting. The price of AutoCAD in 2013 was US\$8,500 for a single license, with a professional version costing \$25,000. These prices are for a single-user, academic, non-commercial license, and for a single user. Price may vary by country, language, and vendor, and may also depend on the services that are offered. With many alternative CAD software programs available for free or at low cost, AutoCAD is no longer a required piece of computer-aided drafting or design (CAD) software. There is a large AutoCAD user base, however, that continues to enjoy the

One of the most important tools in AutoCAD are the templates, pre-configured drawing setups (usually referred to as a series of commands) that cover all or a lot of the common drawing setups. Templates and drawing setups can be downloaded from Autodesk's website or from the AutoCAD Plugin Central. History AutoCAD was originally developed by Winbond Electronics as a vector drawing program, developed in 1987. The first version, AutoCAD 1.0, was released for microcomputers in 1988. In 1992, Paul Yu developed the first version of AutoCAD for Macintosh, named AutoCAD 2.0. This version became the basis for subsequent versions of AutoCAD for Macintosh. In 1994, Paul Yu formed a company called Autodesk Inc. and launched AutoCAD for Windows. The Windows version is also available for Mac OS X and Linux. In 1994, Autodesk introduced AutoCAD 2.5 for Mac. In 1998, AutoCAD 2.5 for Windows was released, and in 1999, Autodesk introduced AutoCAD 2000, which was a completely new application. It is still in development. In 1995, Autodesk introduced Autocad Engineering Suite. The first version, Autocad E for Windows, was released in 2000. In March 2009, Autodesk announced a formal acquisition of 3D Lab LLC, a software company which specializes in the development of AutoCAD and 3D Studio Max plug-ins. Autodesk intends to develop 3D Studio Max and Autocad plug-ins together. This acquisition was part of Autodesk's decision to discontinue its competing product, Alias Wavefront's 3ds Max. Released in September 2011, AutoCAD 2012 includes new Windows Ribbon interface, improved print capabilities, new schematic and exploded views and several other features. AutoCAD 2012 is the second new-generation release since the release of AutoCAD 2007. It has been an "Application Release" (AR) since its release, but there have been several hotfixes. Awards Autodesk has been recognized as a top 100 Global technology company. In 2014, Autodesk was selected as one of the top 100 best companies to work for in the United States. In 2013, Autodesk was selected as a winner in the Best Workplace for the 14th year in a row. See also List a1d647c40b
