It features parametric drawing, advanced functions for 2D and 3D drafting, BIM (building information modeling) capabilities, and the ability to animate various drawing objects such as lines, arcs, circles, and splines. It also features a parametric equation editor, allowing users to create equations to calculate a set of parameters such as lengths, angles, and areas. Here, the trial court, while holding that the plaintiff had the right to be heard in opposition to the magistrate's finding, nevertheless proceeded to hear his case. The plaintiff did not ask for a new hearing. Under these circumstances, it would seem that the trial court should have disposed of the matter in accordance with the above holdings. Moreover, the trial court here, as a result of his findings, ordered the administrator to distribute all of the decedent's estate, in accordance with the public administrator's report, to the next of kin. Section 1102 of our Probate Code provides in part as follows: "After the hearing, if the court approves the *442 finding, the court shall order the distribution of the property of the deceased, in the following order of preference, so far as the same may be capable of distribution, as follows: "1. To the surviving spouse, if any, if there is one. "2. If there is no surviving spouse, to the children, if any. "3. To the parents, if any. "4. If there is no surviving parent or surviving parent and if no child or children, then to the brothers and sisters, if any, in equal proportions, or if they are all dead, or if they are all under the age of 18 years, to the next of kin in equal proportions. "If there is no surviving spouse, child or parent, but there is a surviving parent, then to such parent. If there is no surviving parent, then to the surviving spouse, if any. "If there is no surviving spouse, child or parent, then to brothers and sisters, if any. If there is no surviving brother or sister, then to the surviving spouse, if any. If there is no surviving spouse or child or parent or brothers or sisters, then to the next of kin in equal proportions." The

Import and export for multilevel building drawings, such as those produced by VectorWorks or ARCADiS Users can receive feedback within the software by using this import/export feature, and can send comments back to the original designer or a client without the need to print a paper copy of the drawing. See "Making buildings with multilevel modules – automatic import and export" (video: 6:45 min.) Powerful design tools such as Point-to-Point, which lets you easily connect objects without going via the command line AutoSnapper: AutoSnapper is the first fully featured 2D Drafting tool in AutoCAD that can "snap" to layers. You can place the tool anywhere in your drawing and use it to create objects that are relative to the layer. See "Designing a section cut to stack" (video: 7:20 min.) Editor Enhancements: Improved code folding for greater flexibility. Gain more control over code by using live fonts and symbols. The ability to create shapes from text-based objects. (see below) As you type, there's a Live Formatting bar that suggests and completes code you might use. When you're done, you're ready to make edits, insert a breakpoint, and go. See "How to draw a circle with code" (video: 1:30 min.) The ability to create symbols from text. For example, you can create a shape by typing: { } The symbol will be created and placed in the active drawing area. This symbol can be used to select any text object in the drawing, just like you'd use any other symbol. See "Designing with symbols and text" (video: 4:30 min.) The ability to create symbols using text-based input. You can use a range of text, such as keywords, to select a shape to convert to a symbol. The name of the keyword is converted to the type of symbol. For example: { } Or: {
