## **Sombrero Net Bill Premium R3 Serial Number**

While most of its arid regions were once utilized by water dwellers, Africa's Sahara Desert was largely considered to be uninhabitable for much of its history.[1] With no rainfall for hundreds of miles, most people who ventured into the desert left their livestock at home. At the turn of the 20th century, 10,000 European settlers were present in the Northern Sahara, living off the land, yet desert teeming with grazing animals (e.g. camels). Ultimately, the Sahara's drought-prone climate proved untenable, and overgrazing was almost as damaging to the region as drought. Within half a century, the desert nomadic tribes that had been the Sahara's mainstay were decimated, and their true population numbers were difficult to assess. In the early 1980s, a dramatic increase in the Sahara's temperature combined with the effects of global warming caused many southern areas to become much more hospitable for permanent settlements. Several researchers later theorized that 2 billion years of active volcanism in the area had created an intense greenhouse effect, which began to wane as the Sahara became a more desert-like
