What's New In?

This application will offer you the option to edit text as it appears on a screen. You'll be able to highlight your text, change the font or size, delete lines and insert new lines, so you can easily manage the content of any document or webpage. You can also use the built-in features to perform text formatting, split or join lines, etc. Moreover, thanks to a new line numbering feature, you'll have a well-organized document or web page that you can easily manage with a single click. You can also directly paste any text into a document, webpage or rich-text editor. Special characters can be added to your text, thanks to the built-in encoder and decoder. So, you can conveniently export your text or HTML, PDF, DOC or text documents as rich-text, docx, doc or txt files. With a single click, you'll be able to open a document, webpage or rich-text editor as a Microsoft Word document, PowerPoint presentation or a rich-text document. You can conveniently check whether a particular word appears in your document, either manually or automatically. So, you can sort through the list and take a single look at the search results. You can also match words in several languages, thanks to its built-in language encoder. You'll be able to easily take snapshots of your documents, pages, etc. You can save images as JPEG, PNG or GIF, and you'll be able to save HTML, DOC and rich-text documents as PNG or JPEG files. You'll be able to share the text you're working on with others. The application offers a built-in FTP server that allows you to upload or download files directly from your computer. You can also send your documents to one or more recipients via e-mail, thanks to a built-in e-mail encoder. You can also upload your files from your mobile device to your computer or vice versa. Even if this application has a simple interface, its developers have enabled some powerful features that will allow users to perform coding with a single click. You can easily use snippets for HTML or Java with this application, thanks to its built-in encoder. You'll be able to insert snippets directly into your document. You can also set a command to be automatically performed with every new line in your document or webpage. You'll be able to find and open images that you've stored in your computer, directly from the application. You can also perform text search using images or text as a filter. You'll be able to insert text or images from your device's storage. You'll be able to take snapshots of all your documents, pages, etc. You can store or exchange your data with other applications and services, thanks to the built-in API. This application has been tested in Windows 10. *Features* • Simple and rich interface • Multiple line numbering • Line spl
