[www.noaknoak.com](http://www.noaknoak.com) It's been a long time coming, but my Christmas present to you all is here: River is now officially available as a free download. Over the past few months I have been working on this plugin as a fun project to try something different and make the free VST plugin scene a little more vibrant, and I am very happy to release it to you all. I am going to be posting some new tutorials for it over the coming days, because I really love this plugin and I think it has a lot of

potential, and I am excited to see what you guys do with it. There are 19 presets included in the first release, but I am already working on a full VST version and will make it free when it's ready. It'll be out sooner than later I promise. I also want to give a big thanks to Jan Scholz for providing all the audio sources for me, and to Scott Morrison for bringing my attention to the oscillator node. I hope you guys like it.
